Ultrasonic Skin Scrubber ANLAN ALCPJ01Y-06 (green)

Anlan Ultrasonic Skin Scrubber

Anlan's ultrasonic device is a fantastic skin care tool. It cleanses the complexion, tightens pores and smooths wrinkles, restoring your youthful appearance. The 4 modes of operation guarantee the versatility of the device, and the sonic vibrations of 24000 vibrations per second are responsible for its great performance. When fully charged, the product can run for up to 50 minutes.

Ultrasonic cleansing

Ultrasonic vibrations deeply penetrate the skin, tightening pores and eliminating dirt and cells responsible for aging. As a result, they help to fight acne, smooth wrinkles, and stimulate circulation and metabolism. All this makes Anlan ultrasonic skin scrubber noticeably improve the condition of your skin.

4 modes of operation

With 4 modes, the device comprehensively cares for your skin. Switching between the modes is very easy - just press the button. Available functions are EMS massage, ultrasonic cleansing, deep cleansing with positive ions and moisturizing with negative ions.

EMS massage for smooth skin

The EMS massage feature allows you to stimulate your facial skin with micro-currents, resulting in regained elasticity. It also contributes

to increased production of ATP, the key substance of collagen. As a result, you can enjoy smooth, taut, rejuvenated skin.

Fantastic properties of positive and negative ions

The Ion+ mode can also have a fantastic effect on the condition of your skin. Positive ions help to remove blemishes and get rid of makeup residue. And with the Ion- mode, you can slow down the skin's aging process. Negative ions help to prevent the formation of wrinkles, among other things.

Functional design

Thanks to its carefully considered design, the device is simple and convenient to use. The Ultrasonic skin scrubber is lightweight and handy, and the stainless steel tip is safe for your skin and fits the shape of your face perfectly. The USB port on the bottom of the product allows for convenient charging of the lithium battery, which takes only 2 hours.
