

Computer Case Darkflash DK180 Graffiti (black)

Ref: 4710343794301

Computer Case Darkflash DK180 Graffiti (black)

PC Case Darkflash DK180 Graffiti (Black)

Give your computer case your own character! Thanks to the unique front panel, you can decorate the case with a drawing or an inscription of your own, which not only fits your style, but also changes color thanks to the ARGB backlight compatibility. USB 2.0 and HD audio ports can be found on the top panel for easy access.

Style and functionality

The side panels of the case are mounted via thumbscrews, so their removal is extremely easy. This gives you quick access to components, should you need to retrofit it with new parts or for routine interior cleaning. The left panel has been enriched with tempered glass, which shields the case's interior from external factors and will perfectly present the parts located there, equipped with RGB backlighting.

Built-in ports

On the top you will find the computer's on/off switch, as well as USB 2.0 and HD audio ports. This will make it easy for you to access the contents of any portable memory device and plug in your gaming headphones, whether they are USB or minijack. With the LED button, you can also control the color and type of RGB backlighting inside the case.

Space organization

The design of the case makes it easy to install components and keep everything neat and tidy inside the case. Special brackets can be used to install HDDs and SSDs directly into the case without any additional rails, and numerous openings, located at the most important points for this purpose, allow you to organize the cabling of your components.

7 expansion slots, horizontal and vertical

The PCI slots located on the rear of the case allow you to connect up to seven different components. In addition, the slots located in the rear of the case can be shifted to vertical position. This is the perfect solution to display the full RGB color of the graphics card. The case is not equipped with mounting hardware for other components.

Several fans can be integrated

Ensure adequate cooling inside the case. Whether you want to install fan cooling or AIO cooling, you won't have to worry about mounting them. Mount the All in one water cooling at the top of the case if it measures 120mm in diameter or at the front with 240mm. Mount additional fans at the back of the case and ensure adequate cooling airflow.

Grafitti on Chassis

A feature that sets the product apart from others is the front panel, on which you can place any inscription or drawing. In this way, you will decorate your gaming kit, and thanks to the ARGB connectivity, the drawing will harmonise with all the lighting inside it. Two markers are included to create the drawing. Each is of different thicknesses to be able to create the best graphics. This is perfect for streamers who show off their computer during broadcasts. They can then put their logo, promotional codes, relevant texts or the specifications of their computer on the case. This is a whole new opportunity!
