SuperFire M9-X searchlight - optimal illumination

The powerful SuperFire M9-X flashlight is perfect for a wide variety of scenarios thanks to its 5 light modes. 2 powerful 18650 batteries ensure long-lasting operation, and the brightness of up to 440 lumens will perfectly illuminate the darkness at a distance of up to 390 meters. The relatively light weight of 388 g and a number of practical design features guarantee exceptional comfort.

5 light modes

The flashlight is suitable for many applications. It can shine in 5 different ways - strong, medium, weak, with strobe effect and in SOS mode. This makes it ideal, for example, during a rescue operation, as a camping light, a warning light and much more. SuperFire offers an indispensable product that can always provide the perfect answer to your needs.

Indestructible flashlight

The device is made of extremely durable materials. It is incredibly resistant to damage and will delight you with its reliability. You no longer have to fear every impact - for the M9-X even a fall from a height of 1 m is not a threat!

Powerful powerbank

2 powerful batteries charged via USB provide up to 150 minutes of flashlight operation. Their level of charge is indicated by indicators

located on its housing. That's not all! The device can also serve as a universal powerbank. You no longer have to worry that your phone's battery will refuse to serve when you are away from home, for example, on a camping trip. If you have the M9-X with you, you can quickly and safely charge it.

Perfectly thought-out design

What else sets the SuperFire flashlight apart are several practical design features. The folding bracket located on the bottom allows the device to be placed stably on any surface. This makes it ideal, for example, during a night fishing trip. A special hook at the end of the flashlight allows you to hang it conveniently. Additional storage space in the bracket makes it easy, among other things, to transport cables, screwdrivers or other small accessories.

Lightweight, durable, efficient

The flashlight is made of durable yet lightweight ABS plastic. As a result, the device does not weigh too much, which, combined with its relatively small size, allows it to be conveniently transported. An additional advantage of the equipment is the IP31 waterproof rating. The front white lamp and the side lamps, red and white, provide optimal illumination in almost any situation.
